Profile

Graduate software engineer with strong expertise in full-stack development, specializing in both web and mobile frameworks, as well as artificial intelligence. Proficient in designing intuitive user interfaces by combining high-performance backend integration with responsive front-end design. Passionate about technological innovation, I thrive in dynamic environments and enjoy tackling complex challenges through creative problem-solving. Currently seeking an internship where I can contribute to high-impact projects while continuing to grow my skills in cutting-edge technologies, particularly in Al.

Professional Experience

University Computer Science Instructor, 04/2026 – 09/2026

Institut Maghrébin des Sciences Économiques et de Technologie Sousse

- Teaching Microsoft Access, Microsoft Word, and Algorithms modules.
- Preparing practical labs, exams, and educational materials.
- Supervising and assisting students during practical sessions.
- Evaluating student projects and academic progress.

Fullstack Developer, Freelance, 01/2026 – 06/2026

The M Touch - Luxury Jewelry & Makeup E-commerce

- Designed and developed The M Touch, a premium e-commerce platform specializing in handmade jewelry, glowy makeup, and adorable accessories from Tunisia.
- Built a full responsive Next.js frontend with modern UI/UX (Framer Motion animations, rose/gold gradient theme, live search & category filtering, favorites & cart system).
- Implemented a secure Spring Boot backend (Java, MySQL) with JWT authentication, role-based access (ADMIN/USER), product management, image upload/compression, favorites system, and secure payment integration.
- Created a complete admin dashboard for product CRUD, category management, order tracking, and user privileges.
- Optimized performance with lazy loading, image compression (Thumbnailator), and local filtering for categories/search to deliver instant results without server calls.
- Deployed frontend on Vercel and backend on Railway (free tier) with MySQL integration, ensuring fast, secure, and scalable online presence.

Fullstack Developer, Freelance, 12/2025 – 01/2026

Doctrina Space – Online Learning & Training Platform

- Designed and developed a full-featured e-learning platform for managing courses, categories, users, and multilingual content.(Figma,Nextjs , NodeJs , MySQL)
- Built a scalable backend with role-based access (Admin / User), course management, file uploads, and secure APIs.
- Implemented a dynamic multilingual system (i18n) enabling content translation between languages from backend to frontend.

- Developed a modern admin dashboard for course creation, category management, image uploads, and platform configuration.
- Focused on clean architecture, performance, and user experience to deliver an intuitive and professional learning platform.

Frontend Developer, Freelance, 11/2025 – 03/2026

WeeFarm – Mobile Community Platform for Tunisian Farmers

- Developed WeeFarm, a Flutter cross-platform app (iOS & Android) to connect Tunisian farmers for knowledge sharing, disease alerts, regional sales, and community engagement.
- Built full social feed with posts (text + images), comments/replies, likes/reactions, priority tagging, audience & region targeting.
- Implemented secure auth (Bearer + SharedPreferences), image upload, real-time search, pull-to-refresh, Arabic RTL + French localization.
- Designed responsive UI with staggered animations, circular images, gradients, shadows, and pixel-perfect layouts (ScreenUtil).
- Integrated REST APIs for CRUD on posts, comments, reactions, profiles, and media.
- Focused on performance, error handling, offline support, and farmer-friendly UX (readable text, high contrast, simple navigation).

Fullstack Developer, *Freelance* 07/2025 – 09/2025

Application: CraftHub - E-commerce Platform for Artisanal Products and Workshops

- Developed an innovative e-commerce platform dedicated to the sale of artisanal products and the reservation of creative workshops (pottery, jewelry, textile, wood, etc.).
- Implemented a subscription-based model where each artisan must subscribe to a monthly plan to sell products and offer workshops.
- Integrated artificial intelligence modules to enrich user experience, improve content relevance, automate certain tasks, and optimize pricing.
- Addressed the challenge of helping numerous artisans to effectively promote and sell their creations in a local context, with features like navigation by categories/regions/styles, unique artisanal product purchases, workshop reservations (online or in-person), secure payment, account management, and wishlist.

Fullstack Developer, *GTI* 02/2025 – 06/2025

Application: DocuSmart Intelligent Platform

- Development of a banking document automation platform based on a microservices architecture with Spring Boot, Angular for the frontend and MongoDB as the database.
- Integration of artificial intelligence solutions (YOLOV8, PaddleOCR, Layout LMv3) for invoice data extraction and contract authenticity verification.
- Implementation of automated notifications and intuitive user interface.

Fullstack developer, *Proxym* 06/2024 – 07/2024

Application: Reservation site

- Developed a full-stack reservation system with Nest.JS, ReactJS and React Native.
- Integration of real-time management, billing and automated email notifications.

Fullstack Developer, *Inside Digital Services* 06/2023 – 07/2024

Module: Order management

- Creation of an Odoo module for automating purchase orders using Python and XML.

- Streamlined ERP workflows.

Fullstack Developer, *Terraform Tunisia* 02/2024 – 05/2024
Application: Daycare management platform
- Optimization of a web and mobile application with ReactJS and Flutter.
- Improved planning, communication and real-time updates with Spring Boot.

EDUCATION

Engineer in Computer Science, *Private Engineering School - EPI* 09/2022 – 06/2025

Preparatory Studies: Specialization in Technology, 09/2020 – 06/2022
Preparatory Institute for Engineering Studies, Monastir

Scientific Baccalaureate, *Sayeda Secondary School* 09/2016 – 07/2020

SKILLS

Frameworks
- Sprint Boot, NestJs, React, Angular, Flutter, React Native,NextJs

Languages
Java, Python, JavaScript, TypeScript

DevOps & CI/CD
Docker, GitHub Actions, Jenkins

Databases
MySQL, PostgreSQL, Firebase, MongoDB

AI/ML
YOLOV8, PaddleOCR, Tesseract, LayoutLMv3

LANGUAGES

French
DELF B2

English
TOEIC B2

Arabic
Native

BEHAVIORAL SKILLS

- Communication
- Teamwork
- Problem solving
- Adaptability

ACADEMIC PROJECTS

Travel agency
Design of a travel booking web application with HTML, CSS and JavaScript, including dynamic searches and interactive maps.

Recruitment platform
Created with ASP.NET Core and SQL Server, to manage job ads, candidates and applications.

Job offer management microservice
Developed a Spring Boot microservice to manage job offers, applications and candidate-recruiter interactions. Integration of JWT authentication, notification management and advanced relationships between entities such as job offers, candidates and interviews.

Flutter application for player and match management
Developed a Flutter application for managing players, clubs and matches in a league, Features include player statistics, club details, match schedules and results tracking.

Software testing project
Software testing project focused on Implementing testing strategies, automated testing and quality assurance practices. Includes unit testing, integration testing and performance testing using industry-standard tools.

Certificates

- Fundamentals of Deep

- Building Transformer-Based
Natural Language Processing Applications

- Applications of Al for Predictive
Maintenance
